

## ***INTRODUCTION***

The venerable TRX300 FourTrax, introduced in 1988 and manufactured in Honda's Marion, Ohio facility, features a simple design philosophy that would consistently prove itself the most popular ATV in Honda's lineup and redefine the utility market with its all-purpose abilities. Based on a reliable air-cooled single with 282 cc of displacement, the machine is light and nimble, allowing it to perform a wide range of tasks. Both two-wheel and four-wheel drive models feature an automatic clutch, reverse gear and maintenance free shaft drive. An ultra low first gear provides the pulling power to compensate for the small displacement engine. Whether it is plowing snow or hauling loads on the front and rear racks, it is easy to see why this machine remained in Big Red's inventory until the 2000 model year.
